Applicant's amendments and remarks filed on 11/07//2005 are acknowledged. Claims 18 and 21 have been. Claims 15,16,17,19 and 20 have been amended. New claims 22-25 have been added.

The rejection of claims 15-17 under 102(b) as being anticipated by Miller et al., of the Office Action mailed on 05/06/2005, has been overcome through applicants' amendments. The rejection of claims 19 and 20 under 102(b) as being anticipated by Sproat et al., of the Office Action mailed on 05/06/2005, has been withdrawn in view of applicants' remarks stating that the Sproat reference has a publication date of Feb. 25,1991 and the parent application (S/N: 07/967,267) to the present one, accorded a priority date of Aug. 13,1990.

Claims 15-17, 19,20 and 22-25 are currently pending in this application.

During the course of reconsideration of the application, a prior art reference not previously disclosed by the applicants or the examiner came to light (see rejection below).

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claims 15,19 and 22 contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Either one of T₃ and T₅ substituents are either a hydroxyl blocking group, phosphate or an activated phosphate group and the other of T₃ and T₅

is a nucleotide or both T₃ and T₅ are nucleotides in claims 15, 19 and 22 do not have adequate support in the specification.

Obviousness-type Double Patenting Rejection

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 15-17, 19,20 and 22-25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-21 of U.S. Patent No. 5,514,786 ('786) and applicant's other U.S. Patents of same scope as following:

Claims 1-20 of 5,602,240

Claims 1-29 of 5,610,289

Claims 1-16 of 5,489,677

Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in each of the application and the '786 patent are

Art Unit: 1623

directed to substantially the same subject matter, i.e., in the instant claims, the invention is claimed in terms of purine 2'-O-alkyloligonucleotide represented by the general formula (I) of claims 15, 19 and 22 wherein the "X" substituent is alkyl, alkenyl or alkynyl of the carbon chain length between C1-C20, while in the '786 patent it is claimed in terms of 2'-O-alkyloligonucleotide wherein the "X" substituent is alkyl, alkenyl or alkynyl and base moiety is a heterocyclic base. The said base moiety is an adenine or guanine (col.20, lines 55-60). It would have been obvious to one having ordinary skill in this art, at the time the claimed invention was made to have synthesized 2'-O-alkyloligonucleotide of the '786 patent which have the same use and effect. One having ordinary skill in the art would have been motivated, to have synthesized 2'-O-alkyloligonucleotide of the '786, which have the same use and affect.

The examiner notes the instant claims; the '786 patent and said U.S. Patents of applicants do indeed substantially overlap therefore this obviousness-type double patenting rejection is necessary to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees.

Therefore the claims are co-extensive.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22,24 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Miller et al (see Office Action dated 05/06/2005).

The applicants' claims are directed toward purine 2'-O-alkyloligonucleotide wherein purine moiety is guanine and the "X" substituent is C₁-C₂₀ alkyl.

Miller et al. anticipates the claims as it teaches guanosine 2'-O-methyloligonucleotide (page 1988, 2nd col., middle para.).
